

Magnetic rubber

Magnetic rubber is an essential tool used in many fields : in the **industrial** sector, in **thermal** or **acoustic** insulations, but also in **POS** advertising to hold and fix advertising posters. Due to its magnetic function, this elastomer is infinitely repositionable and reusable. Available in several formats, magnetic rubber is also very easy to cut.

Adhesive magnetic rubber has a double coating and strong adhesive properties on a wide variety of surfaces. Our extensive Arelec Solution range gives you a choice of :

- **FLEXAM Isotropic rubber** in standard (raw), self-adhesive (double-sided adhesive on the non-magnetic side), and double-sided magnetised (high-performance, paired adhesive for perfect overlap) versions. This elastomer has high-performance magnetic properties for optimum adhesion.
- **FLEXOR anisotropic rubber** with very high magnetic force in TESA adhesive version

Model	Thickness (in mm)	Typical force (in g/cm ²)	Width (in mm)	Length (in m)	Features	Reference
FLEXAM isotropic	9/10	35	12,7	30	STD Adhesive	0741055
			19			0741056
			25,4			0741057
	15/10	55	12,7	30	STD Adhesive	0751057
			19			0751063
			25,4			0751071
			50			0751072
	15/10	55	12,7	30	TESA adhesive	0751076
			19			0751068
			25,4			0751069
FLEXOR Anisotropic	15/10	80	12,7	30	TESA adhesive	0758050
			19			0758051
			25,4			0758052
